AVERAGE REVIEW SCORE

4.02 / 5

Across all reviewed orders

ORDER FULFILLMENT SNAPSHOT

METRIC	VALUE
Delivered Orders	84,801
Late Orders	6,625
On-Time Delivery Rate	92.19%

REVENUE AT RISK (CANCELLED / UNDELIVERED)

METRIC	VALUE
Revenue at Risk	BRL 317,208.06
Total Revenue (base)	BRL 11,670,409.02
Risk %	2.72%

Reading the scorecard: the business generated roughly **BRL 15.09M** in revenue across **73,231 orders**, an average order value of **BRL 206**. On-time delivery sits at a healthy **92.19%**, and customer sentiment is positive at **4.02 / 5**. Revenue at risk from cancellations is contained at **2.72%** of the order base — worth monitoring but not yet a red flag.

2 Revenue & Order Growth Trend

Is the business growing month over month? Monthly revenue and order volume with growth rate overlays from late 2016 through late 2018.

MONTHLY REVENUE & MOM REVENUE GROWTH

MONTHLY ORDERS & MOM ORDER GROWTH

Insight: revenue and order volume both show a clear ramp from late 2016 into a strong, stable plateau through most of 2017–2018, generally holding in the **BRL 700K–870K/month** range at peak. Early months (2016) reflect the platform's ramp-up period, and the sharp early growth percentages are largely a base-effect of very low starting volumes. The final period (Sep–Oct 2018) drops toward zero, most likely reflecting incomplete data for the most recent month(s) rather than an actual demand collapse — worth confirming with the data engineering team before reporting externally.

3 Delivered vs Cancelled vs Pending Mix

What share of orders complete successfully, and how much value sits in problem states?

ORDER STATUS COMPOSITION

STATUS	ORDERS	SHARE OF TOTAL
Delivered	71,055	97.03%
Pending (approved / created / invoiced / processing / shipped / unavailable)	1,712	2.34%
Canceled	464	0.63%

REVENUE BY ORDER STATUS

Insight: the vast majority of orders — **97.03%** — reach delivered status, which is a strong fulfillment signal. Cancellations are a small minority (**0.63%**) but still represent real revenue leakage, and the "Pending" bucket (**2.34%**) is a mix of in-flight and stalled orders worth segmenting further to separate normal transit time from genuinely stuck orders.

4 Review Score Health

Are customers happy overall? Distribution and summary of the 98,410 reviews collected across the order base.

98,410

TOTAL REVIEWS

4.09 / 5

AVERAGE RATING

57.83%

5-STAR REVIEWS

11.46%

1-STAR REVIEWS

CUSTOMER RATING DISTRIBUTION

Reading customer sentiment:

- Ratings are strongly polarized around the top end — most customers are highly satisfied.
- 5-star reviews (**57.83%**) dominate the distribution, well above the 1-star share.
- 1-star reviews (**11.46%**) form a meaningful but secondary cluster — typically tied to late or problem deliveries.
- The average score of **4.09/5** reflects a generally healthy customer experience with a clear opportunity to convert the bottom-rated segment through delivery reliability improvements.

5 Summary & Recommendations

Key takeaways from the exploratory analysis and suggested next steps for the business.

KEY FINDINGS

- **Healthy scale:** BRL 15.09M in revenue across 73,231 orders, with a stable AOV of ~BRL 206.
- **Strong growth trajectory:** monthly revenue and orders scaled up through 2017 and held a steady plateau through mid-2018, indicating a maturing, stable marketplace.
- **Reliable fulfillment:** 97.03% of orders are successfully delivered, and 92.19% arrive on or before the estimated delivery date.
- **Contained risk:** only 2.72% of revenue is tied to cancelled/at-risk orders — low, but non-zero leakage worth tracking over time.
- **Positive customer sentiment:** average review score of 4.02–4.09/5, with more than half of all reviews rated 5 stars.

RECOMMENDATIONS

- Investigate the Sep–Oct 2018 revenue/order drop-off to confirm it is a data completeness issue rather than genuine business decline before it reaches leadership reporting.
- Segment the "Pending" order bucket by sub-status and age to separate normal in-transit orders from genuinely stalled ones that need operational intervention.
- Prioritize root-cause analysis on late deliveries — they correlate directly with 1-star reviews and represent the clearest lever to lift the average review score.
- Track revenue-at-risk (%) as a recurring KPI on the scorecard to catch cancellation trend shifts early.
